

Consolidated Intermediate Financial report

January–September 2017

MAIN FIGURES

In the period January–September 2017, Grupo Solaria recorded **€22.277mn in net sales (+86%), €18.292mn in EBITDA (+70%) and €5.6mn in net profit (+91%)**. These earnings easily surpass the company's €12mn in net sales, €10.748mn in EBITDA and €2.931mn in net profit recorded during the same period of the preceding fiscal year.

The ratio of EBITDA to sales (EBITDA margin) stands at 82%, which may be considered an optimal and standard level.

The excellent performance shows **robust and growing earnings** that are the result of a new operating model that focuses on energy generation based on solar photovoltaic technology. The performance was also driven by the development of new generation plants and optimisation of general costs and project finance costs.

KEY POINTS FROM THE PERIOD: PERFORMANCE OF THE BUSINESS

- In January 2017, **Grupo Solaria's generation unit Solaria Energía Generación Renovable S.L. reached an agreement with the venture capital fund Solaria Aleph Generación F.C.R. regarding the acquisition of Serre Uta 1 Societa Agricola s.r.l. for a total enterprise value of €24,031,437.** The agreement, signed on 7 June 2017, brought about a change in control on 29 September 2017.
- The issuance and placement of the **PSP6 Bond** on 22 February 2017 on Spain's MARF alternative fixed income market, totalling €45.1mn, with a 3.75% coupon and maturing in December 2037, has allowed the company to **restructure the financial debt** of PSP6 (a 9.9 MW plant located in Fuenmayor, La Rioja), replacing the financing with financial institutions it had to date. **This bond allows financing of the company PSP6 to be optimised to the fullest and makes it possible to increase available free cash flows.**
- On 23 February 2017, Inter-American Investment Corporation (IIC), a member of the Inter-American Development Bank (IDB) Group, extended a **USD25mn 18-year loan for the construction of two solar photovoltaic technology based power production plants: Yarnel S.A. and Natelu S.A. (Uruguay).** As of the date of release of this report, both plants were onstream and generating power.
- On 12 June 2017, Grupo Solaria signed a **20-year lease agreement for the Fuenmayor industrial facilities with the La Rioja-based corporate group Grupo Perica.** The agreement is to generate **global cumulable income in excess of €9.0mn.**
- On 30 June 2017, **Grupo Solaria's generation unit Solaria Energía y Generación Renovables, S.L. decided to buy the whole of Magacela Solar 1, S.A. from DTL Corporación S.L** (the ultimate parent company of Grupo Solaria), for an enterprise value of €61.59mn. **The project bond "senior secured notes 3,769% Magacela Solar 1, S.A.U." listed in the open market (Freiverkehr) and fully acquired by BlackRock Real Assets was simultaneously issued to finance the acquisition of this asset. The transaction was formalised on 28 July 2017.** The accounting effect of this transaction has been observed since 1 January, 2017 because it was a jointly

controlled operation. The assets and liabilities of Magacela Solar 1 are now recorded by Grupo Solaria at book value rather than fair value.

- On 6 July 2017, the **venture-capital fund Solaria Aleph Generación F.C.R., 50% owned by Grupo Solaria, sold its stakes in the companies Solar One Srl and Energia Srl**, both of which own two photovoltaic parks in Italy. Grupo Solaria obtained €3.663mn in the **sale of half of its indirect stake** in both companies.
- On 17 July 2017, **the Uruguayan plant Yarnel obtained authorization confirming that the plant meets all requirements to commence commercial operation.**
- On 26 July 2017, **Grupo Solaria was awarded 250 MW of new generation capacity in the third Spanish renewables auction.**
- On 5 September 2017, **the Uruguayan plant Natelu obtained authorization confirming that the plant meets all requirements to commence commercial operation.**

Grupo Solaria ended this third quarter with **€44.495mn in working capital**. Of this amount, €25.614mn corresponds to investments in Uruguayan plants.

Acquisition of Serre Uta 1 Societa Agricola s.r.l.

In January 2017, **Grupo Solaria's generation unit Solaria Energía Generación Renovable S.L. reached an agreement with venture capital fund Solaria Aleph Generación F.C.R. regarding the acquisition of Serre Uta 1 Societa Agricola s.r.l. for a total enterprise value of €24,031,437.** The agreement, signed on 7 June 2017, brought about a change of control on 29 September 2017.

Serre Uta 1 owns a 5.8 MW solar plant located in Sardinia (Italy). Prior to this acquisition, Grupo Solaria held a 50% indirect stake in Serre Uta 1 (through a stake in Solaria Aleph Generación F.C.R.). This company was recorded using equity-method criteria until 31 December, 2016.

Issuance and placement of PSP6 senior secured notes February 2016

On 22 February 2017, Grupo Solaria proceeded to restructure the financial debt of the PSP6 9.9 MW plant located in Fuenmayor (La Rioja), replacing the financing with financial institutions it had to date with the issuance of bonds in Spain's MARF alternative fixed-income market. This increased Grupo Solaria's cash capacity.

Specifically, on 27 February 2017, the MARF permitted the listing of the issuance of guaranteed senior securities of the company Planta Solar Puertollano 6, S.A.U. for an amount of €45.1mn, a 3.75% coupon and maturity in December 2037.

With the issuance of the aforementioned bond and the resources generated, Grupo Solaria proceeded to cancel €16mn in bank financing with Bankinter associated with the photovoltaic plant (along with interest-rate-hedging instruments related to this financing with Bankinter, which were designed to provide protection from potential rate fluctuations), as well as debt associated with the Fuenmayor industrial assets for an amount of €14.4mn with Banco Popular.

Disbursement of the loan from Inter-American Investment Corporation for the construction, operation and maintenance of Yarnel S.A. and Natelu S.A.

On 9 September 2016, Grupo Solaria closed two financing arrangements with Inter-American Investment Corporation (IIC), member of the Inter-American Development Bank (IDB) Group, for the construction of Yarnel and Natelu. **The financing totalled USD25mn and was extended on 23 February 2017.**

Natelú solar plant includes a USD6.1mn senior loan from IIC and a USD6.1mn co-loan from the Canadian Climate Fund for the Private Sector in the Americas (C2F). The Yarnel plant has received USD6.4mn in IIC financing and USD6.4mn from the C2F. **The financing package has a term of 18 years.**

Twenty-year lease signed with Grupo Perica for the Fuenmayor plant

On 12 June 2017, Grupo Solaria signed a **20-year lease with the La Rioja-based corporate group Grupo Perica for the Fuenmayor industrial installations. The lease is to generate global cumulable income in excess of €9.0mn.**

This transaction makes it possible to factor into valuations industrial and real-estate assets while continuing to improve the group's financial position.

Acquisition of Magacela Solar 1, S.A. and its associated solar plant

On 30 June 2017, **Grupo Solaria's generation unit Solaria Energía y Generación Renovables, S.L. decided to buy the whole of Magacela Solar 1, S.A. from DTL Corporación S.L** (the ultimate parent company of Grupo Solaria), for an enterprise value of €61.59mn. **The transaction was formalized on 28 July 2017.** The accounting effect of this transaction has been in place since 1 January 2017 because it was a jointly controlled operation. The assets and liabilities of Magacela Solar 1 are now recorded by Grupo Solaria at book value rather than fair value.

Magacela Solar 1, S.A.U. owns a 10 MW plant (10.9 MWp) in Magacela (Badajoz). **This plant is financed through a "senior secured notes 3.769% Magacela Solar 1, S.A.U." project bond listed in the open market (Freiverkehr) fully acquired by BlackRock Real Assets on 24 July 2017.** The main characteristics of this project bond are:

- Amount of issuance: €47,100,000
- Date of maturity: 30 June 2037
- Coupon: 3.769% nominal annual

Sale of stakes in companies Solar One Srl and Energia Srl

On 6 July 2017, the **venture-capital fund Solaria Aleph Generación F.C.R., 50% owned by Grupo Solaria, sold its stake in the companies Solar One Srl and Energia Srl**, both of which hold two photovoltaic parks in Marche (Italy). Grupo Solaria obtained **€3.663mn for the sale of 50% of its indirect stake** in both companies.

The Uruguayan plant Yarnel obtains authorization confirming that the plant meets all requirements to start commercial operation

On 17 July 2017, Grupo Solaria reported that it had successfully connected the Yarnel S.A. plant in Uruguay and **had obtained from Usinas y Trasmisiones Eléctricas (UTE) authorization confirming that the plant meets all requirements to start commercial operation.** UTE is a Uruguayan state-owned company with over 100 years of history that is engaged in power generation, transmission, distribution and marketing activities, the provision of related services and consulting. Yarnel S.A. is a solar power plant with related facilities and installed capacity of 9.5 MW (11.6 MWp) located near the city of Young in the Río Negro Department.

Grupo Solaria awarded 250 MW of new generation capacity in third Spanish renewables auction

On 26 July 2017, **Grupo Solaria announced that its unit Planta FV3 S.L had been awarded 250 MW of new generation capacity in the third renewables auction.** The new capacity, which should be fully operational by 31 December 2019, will allow its generation perimeter in terms of MW to be increased over 3.5 times in just over two years.

Uruguayan plant Natelu obtains authorization confirming that the plant meets all requirements to start commercial operation

On 5 September 2017, Grupo Solaria reported that it had successfully connected the Natelu S.A. plant in Uruguay and **obtained from UTE authorisation confirming that the plant meets all requirements to start commercial operation.** UTE is a Uruguayan state-owned company with over 100 years of history that is engaged in power generation, transmission, distribution and marketing activities, the provision of related services and consulting. With an installed capacity of 9.5 MW (11.1 MWp), Natelu S.A. is located near the city of Mercedes (Soriano Department).

PROFIT AND LOSS ACCOUNT

THOUSANDS OF EUROS (K€)	Q3-2017	Q3-2016	Absolute variation	Relative variation
Net sales	22.277	12.000	10.277	86%
Cost of sales	935	798	137	17%
Gross sales margin	23.213	12.798	10.415	81%
Other income	822	2.004	(1.182)	-59%
Personnel expenses	(2.009)	(2.105)	96	-5%
Other operating expenses	(3.734)	(1.948)	(1.786)	92%
EBITDA	18.292	10.748	7.543	70%
<i>EBITDA / Net sales</i>	82%	90%	-	-
Amortisations and depreciations	(6.244)	(4.858)	(1.386)	29%
EBIT	12.048	5.890	6.157	105%
<i>EBIT / Net sales</i>	54%	49%	-	-
Financial P&L	(7.215)	(3.512)	(3.703)	105%
Equity Method Accounted Co. Result	767	553	214	39%
EBT	5.600	2.931	2.669	91%
Tax	-	-	-	-
NET PROFIT / (NET PDA)	5.600	2.931	2.669	91%
<i>Net profit / Net Sales</i>	25%	24%	-	-

The amount recorded under “*other income*” has fallen 59% vs. the same period a year earlier because **debt regularisation agreements were reached with suppliers last year**. These kinds of negotiation with suppliers were definitively concluded last year.

The line *Cost of sales* shows a positive balance, since it includes costs activations in different projects, especially those located in Uruguay, whose final stage of construction was developed in the first half of this year.

The increase in operating costs in the nine months ending on 30 September 2017 vs. the same period a year earlier is largely explained by the acquisition in 2017 the companies Magacela Solar 1, S.A. and Serre UTA, S.r.l. and, therefore, the incorporation of the financial statements of these companies in the consolidation scope, the operating costs of the consolidated profit and loss account of Grupo Solaria as from 1 January 2017. This increase is also explained to a lesser extent by the new expenses associated with the two new Uruguayan plants.

The increase in financial expenses is caused by the expenses related to the cancellation of the project finance of PSP6 and by costs associated with higher volume of non-recourse debt held by Grupo Solaria as a result of the successfully completed refinancing processes. Said increase is also the result of the incorporation to the consolidation scope of Grupo Solaria of the financial expenses of Magacela Solar 1, S.A. and Serre UTA S.r.l. To a lesser extent, the increase is also due to new expenses associated with the two new Uruguayan plants.

SALES

In the first nine months of 2017, the net sales of Grupo Solaria amounted to €22.277mn, constituting an **86% increase vs. the figure recorded during the same period a year earlier**, chiefly due to the change in the group's consolidation scope caused by the incorporation of the aforementioned photovoltaic parks. Net sales generated in Italy registered greatly sustained growth due to the global consolidation of Serre UTA and the sales generated by Ollastra. Corporate sales were affected by certain one-off fees.

To a lesser extent, the higher irradiance and ongoing improvement in operation and maintenance are reasons for the sound performance of sales in practically all the plants.

Detail of sales by business unit during the period January–September 2017:

EBITDA AND EBITDA MARGIN

The increase and diversification of the group's generation profile, along with the flat volume of regularisation of debt with suppliers and the higher operating expenses have a normalising effect on the EBITDA margin, with stands at 82% vs. 90% released during the same period in 2016.

BALANCE SHEET

The **consolidated balance sheet** shows very positive performance, reflecting both the sustained growth of the generation perimeter and improvements in the financing of its plants.

Grupo Solaria ended 3Q17 with €44.495mn in working capital.

Consolidated **balance sheet** as of 30 September 2017 vs. that of 31 December 2016:

Data in thousands of euros	30/09/2017	31/12/2016	Absolute variation	Relative variation

Debt with related entities	534	93	441	475%
Commercial creditors and other accounts payables	3.541	22.506	(18.966)	-84%
Other current liabilities	771	591	180	30%
TOTAL LIABILITIES	272.089	190.301	81.787	43%

Regarding this consolidated balance sheet, the increase in tangible fixed assets is due to the addition to the group's consolidation scope of Magacela Solar 1, S.A. and Serre UTA S.r.l., of respectively 10 MW and 5.8 MW nominal power. The increase in tangible fixed assets is also caused by the incorporation to the scope of Grupo Solaria of Magacela Solar 1, S.A. and Serre UTA S.r.l. at net book value.

Commercial debtors and other accounts receivable and cash and equivalent liquid assets are also affected by incorporation into the group's consolidation scope of the assets from Magacela Solar 1, S.A. and Serre UTA S.r.l.

The cut in investments of companies placed on an equity basis is caused by the acquisition of 100% of Serre UTA. Before this acquisition, Grupo Solaria held a 50% stake of Serre Uta (with no control of the company) that was recorded under equity-method criteria. Now Grupo Solaria can consolidate Serre Uta by global integration. Additionally, Solar One Srl and Energia Srl, two companies partially owned (not controlled though equity accounted) by Grupo Solaria through a 50% stake in the Venture Capital Fund Solaria Aleph Generación F.C.R. were sold during this third quarter of 2017. This sale had a direct impact on Grupo Solaria's investments of companies placed on an equity basis line.

Lastly, inventories are also affected by investments made in the first six months of the year in the plants located in Uruguay. These plants should be filed as "delivered" before the end of 2017.

It is worth emphasizing again that during the first nine months of the year:

Grupo Solaria proceeded to restructure the financial debt of PSP6, the 9.9 MW plant located in Fuenmayor (La Rioja), replacing the financing with financial institutions it had to date with the issuance of bonds on the MARF alternative fixed income market providing Grupo Solaria with a cash surplus.

More specifically, on 27 February 2017, the MARF permitted the listing of the issuance of guaranteed senior securities of the company Planta Solar Puertollano 6, S.A.U. for an amount of €45.1mn, at 3.75% interest and maturity in December 2037.

With the issuance of the aforementioned bond and the resources generated, Grupo Solaria proceeded to cancel the bank financing linked to the photovoltaic plant for an amount of €16mn with Bankinter (along with the hedging of interest rates related to this financing with Bankinter contracted to hedge against potential interest rate fluctuations), as well as the debt linked to the industrial assets in Fuenmayor for an amount of €14.4mn with Banco Popular.

On the other hand, and as explained above, Magacela Solar 1, S.A.U. issued project bonds amounting to €47.1mn at an interest rate of 3.769% per annum and with a maturity date of 30 June 2037. The proceeds obtained by this bond issue were used to cancel project finance debt held with financial institutions amounting to €30.6mn as well as the €2.1mn hedging of interest rates derivative contracted to hedge against potential interest-rate fluctuations related to this financing.

These transactions largely explain the increase in obligations and long-term bonds.

The increase in liabilities with credit institutions is due to the disbursement of the USD25mn loan for the construction of Yarnel and Natelu and the acquisition of Serre Uta 1 Societa Agricola s.r.l.

The line debt with related entities was greatly affected by the **purchase of Magacela Solar 1, S.A.U. from DTL Corporación, S.L. and has affected the balance sheet since 1 January 2017.**

STRATEGY AND PERSPECTIVES

Grupo Solaria is a well-known player in the solar photovoltaic sector, since it is one of the few who are exclusively engaged in this type of energy.

Grupo Solaria's business model focuses on the generation of photovoltaic energy through existing projects and the development of new projects in countries with high profitability and controlled risk.

Grupo Solaria has been able to adapt and give value to its projects. Grupo Solaria can distinguish and invest in the most suitable projects in terms of profitability/risk as a result of the knowledge it has acquired in over a decade of operation and over 150 MW developed and constructed on a global scale.

Grupo Solaria is able to locate its future investment projects because of its specialists located in different local offices that study and select the best opportunities.

Grupo Solaria is perfectly positioned to fulfil its new strategic plan for investment and growth in solar photovoltaic energy generation. We are clearly committed to renewable energies, as evidenced by our new investments.

At present, the hefty reduction of costs associated with photovoltaic energy is allow us to reach network parity in some markets. This means that the cost of producing solar energy is even lower than the cost of generating conventional energy from sources such as gas, fuel oil, coal or nuclear. Further, its easy implementation and reduced execution time mean that the interest in development of these types of projects will grow exponentially. Solar photovoltaic energy is turning out to be an excellent and ecological solution for the development of both emerging and developed economies. In fact, Grupo Solaria was awarded 250 MW of new capacity in the third Spanish renewables auction on 26 July 2017. This new capacity will be profitable without the need for subsidisation.

Grupo Solaria pioneers the use of new forms of financing. We are experts in issuing renewable project bonds. We know how to make the most of high existing demand from large international investment groups for these types of investment projects. As a result of these new financing methods, projects that are profitable and have a very positive economic impact are becoming a reality.

We generate value for our shareholders through:

- Greenfield: The development of new solar plant projects by participating in the entire management process from obtaining permits to launching the solar plants.
- Brownfield: The acquisition of solar photovoltaic assets in production that improve the company's visibility.
- Financial optimisation of projects

The strategic objective of Grupo Solaria continues to be its positioning and consolidation as an expert company in the domestic and international solar energy market.

CONCLUSIONS

Excellent earnings that are clearly registering growth (sales: +86%; EBITDA: +70% and net profit: +91%)

Permitters of generation and income show highly sustained growth as a result of the acquisition of the companies Serre Uta 1 Societa Agricola s.r.l. and Magacela Solar 1, S.A.U., on books since 1 January 2017.

Grupo Solaria continues to optimise the financial structure of its balance sheet and to provide its cash with further resources to deal with new investment projects and growth.

The new business model provides recurring income, positive earnings and excellent margins.

The issuance and placement of the bonds associated with PSP6 and Magacela and the disbursement of the USD25mn loan by the IIC have had highly favourable effects on Grupo Solaria that include the following:

- Continued strengthening of balance sheet
- Continued transformation of recourse debt to non-recourse debt
- Freeing of more cash flows
- Providing of the group with surplus cash and capacity to deal with new projects

Working capital totals €44,495mn (of which €25.614mn corresponds to investments in Uruguayan plants).

The two new Uruguayan plants are now onstream and starting to generate energy.

Renting the Fuenmayor industrial installations to Grupo Perica for 20 years with €9.0mn in guaranteed rent **provides this assets with excellent real-estate value.**

A promising future:

On 26 July 2017, **Grupo Solaria was awarded 250 photovoltaic MW in the third renewables auction. This new capacity**, which should be fully operational by 31 December 2019, **will allow the generation scope to be increased in terms of MW by over 3.5 times in just over two years.**

IMPORTANT EVENTS DURING THE PERIOD
